

REBMA IMPEX · MOBILE

Aczone Design System & Architecture Specification

The verified, living reference for Rebma Impex Mobile's theme tokens, component library, department screen breakdown, and the running design decisions log.

✓ Screen count verified: 134 (corrected from 124)

Living reference · regenerated whenever a new design is agreed · rebma-mobile · last verified 2026-09-18

VERIFIED

Total Screen Count — 134

Method: every `.tsx` file under `screens/` was listed (134 files), then cross-checked to confirm each one has a real importer somewhere in `navigation/`, `screens/`, or `components/`. Zero dead files, zero orphans.

GROUP	COUNT	WHAT IT IS
Registered department screens	111	Imported directly into a department's <code>screens</code> map in <code>departmentRegistry.ts</code> .
Root, Auth & Shell screens	15	Not department-scoped (Welcome, Login, Register, Profile, Notifications, Feedback, Search, Payslips, Messenger x2, Placeholder, DesignSystem, AnalyticsTab, BoardroomHome, ViberHome).
Cross-department Analytics-tab screens	4	Fin/HR/CEO/Risk Analytics screens, reached via the separate bottom-tab Analytics screen, not the department Module Launcher.
Driver-only screens	2	Department-agnostic driver flow.
Shared canonical screens (re-exported)	2	Marketing's own Invoices/SalesHistory source files, re-exported by Finance/Management/CEO.
Total	134	

Registered screens per department

DEPARTMENT	REGISTERED
Accounts Department (Finance)	20
CEO Command	14
Management	14
Admin & Warehouse	12
Risk & Compliance (incl. relocated Dispatch)	12
Human Resources	10

Marketing & Sales	7
Reception	6
Production	6

Component Library — 44 Components

LAYER	COUNT	EXAMPLES
<code>components/ui/</code> — prop-only primitives	23	Avatar, Badge, BarChart, Button, Card, CountUp, DataList, EmptyState, Input, MetricCard, PageTitle, ProgressBar, ProgressRing, RatingBadge, Screen, SearchablePicker, SectionHeader, Sheet, Skeleton, StatusCapsule, StickyActionBar, Tabs, Toggle
<code>components/shared/</code> — data-aware composites	15	ApprovalHistoryPanel, DeptActivityGrid, DocumentTemplatesEditor, ExportSheet, FleetMap, GroupCallSheet, LocationPicker, NativeCallSheet, PendingApprovalsAlertCard, PerformanceAlertsPanel, PriceCatalogGrid, RequestTimelineSheet, SpreadsheetGrid, TransactionsGrid, WalletsGrid
<code>components/chrome/</code> — navigation shell	6	AppHeader, ConnectivityBanner, DepartmentSwitcherSheet, DriverQuickActionsSheet, ModuleLauncher, QuickActionsSheet
Total	44	

Theme Tokens

Confirmed directly against the live `theme/tokens.ts` .

Brand Colors

Primary brand: Royal Violet `#5B4DFF` → pressed `#4F46E5` , with soft lavender background `#F8F7FD` .

Semantic Status Colors

Success

`#DCFCE7` / `#10B981`

Info

`#E0F2FE` / `#0284C7`

Warning

`#FEF3C7` / `#D97706`

Danger

`#FFE4E6` / `#E11D48`

Purple

`#EDE9FE` / `#6C5CE7`

Muted

`#F1F5F9` / `#64748B`

Fixed Action Icon Colors

emerald `#10b981` · blue `#3b82f6` · indigo `#6366f1` · amber `#f59e0b` · teal `#14b8a6` · sky `#0ea5e9` ·
rose `#f43f5e` · violet `#5b4dff`

The Settings > Appearance dynamic customization engine (background palette switcher, accent swatch switcher, font scaling) is carried over from the prior spec and has not yet been re-verified line by line against the live `AppearanceScreen.tsx` .

Department Screen Breakdown

CEO Command

14 + 1 Analytics-tab

Overview, SupplierOrders, Transactions, Invoices, Receipts, PriceCatalog, Wallets, Accounts, Approvals, PriceApprovals, Tracking, LiveUsers, DeptActivity, Spreadsheets — plus CeoAnalyticsScreen

Admin & Warehouse

12

Overview, PortIngestion, ApprovedGoods, Stock, Releases, OpsHistory, FleetOverview, FuelManagement, Maintenance, FleetAnalytics, OpsAnalytics, Spreadsheets

Accounts Department (Finance)

20 + 1 Analytics-tab

Evaluation, OrdersQueue, RecordPayment, Receipts, Invoices, SalesHistory, PriceCatalog, Wallets, Transactions, CreditMgmt, Cheques, MobileMoney, PettyCash, Expenses, Payroll, RecurringPayments, Statement, TaxVAT, FinReports, Spreadsheets — plus FinAnalyticsScreen

Risk & Compliance

12 + 1 Analytics-tab

RiskOverview, RiskApprovals, CustomerCredit, Recruitment, Deliveries, ActiveDeliveries, Drivers, Tracking, ProofOfDelivery, Scanner, DeptActivity, Spreadsheets — plus RiskAnalyticsScreen. (Dispatch screens physically live under adminWarehouse/ but are registered under Risk per Phase 9.)

Management

14

CargoApproval, CreditApproval, Transactions, SetPrices, Invoices, Receipts, Ledger, Payroll, MgmtAnalytics, StockManagement, Tracking, DeptActivity, PerformanceAlerts, Spreadsheets

Marketing & Sales

7

Overview, CreateOrder, RegisterCustomer, PriceCatalog, CreditRequests, MktAnalytics, Spreadsheets. (Also owns the shared Invoices/SalesHistory source files reused by other departments.)

Human Resources

10 + 1 Analytics-tab

Employees, Staff, Attendance, Registrations, LeaveManagement, Payroll, DepartmentManager, PerformanceAlerts, HrQueries, Spreadsheets — plus HrAnalyticsScreen

⚙️ Production

6

Requisition, InternalOrders, WIPStock, OutputRecording, ProdAnalytics, Spreadsheets

🏢 Reception

6

VisitorLog, Visitors, EmployeeCheckin, DailyReports, Analytics, Spreadsheets

🎥 Boardroom

4

VideoConf, Announcements, DirectMessages, Meetings

⚙️ Settings

6

Appearance, Profile, ChangePassword, TwoFactor, ControlCenter, DeleteAccount

🌐 Root, Auth & Shell

15

Welcome, Login, Register, Profile, Notifications, Feedback, Search, Payslips, MessengerChannels, MessengerThread, DepartmentPlaceholder, DesignSystem, AnalyticsTab, BoardroomHome, ViberHome

🚚 Driver-only

2

DispatchHome, DriverTrips — department-agnostic

Component Design Specifications

Carried over from the prior spec — matches the confirmed accent/status tokens, but individual per-component radii/shadow values have not yet each been re-verified against source. Treated as design intent until each gets its own log entry.

COMPONENT	KEY ACZONE SPECIFICATION
Card.tsx	Pure white, borderRadius: 22 , micro-border #EDE9FE , ambient soft violet drop-shadow.
MetricCard.tsx	2×2 grid, 44×44 pastel icon container, bold KPI counters, uppercase labels.
DataList.tsx	Leading colored icon tile, bold title + status pill, two-column key/value grid, context actions.
Button.tsx	Full rounded pill, gradient fill, white bold label with trailing arrow icon.
Input.tsx	Soft lavender background, borderRadius: 16 , focused violet glow.
ProgressBar.tsx	Rounded capsule tracks, dual-color gradients, percentage labels.
Tabs.tsx	Rounded pill chips, solid violet active fill, soft-lavender inactive.
Sheet.tsx	Animated bottom sheet, grab bar, × dismiss, padded footer.

Design Decisions Log

Every entry reflects the piece's actual, current implementation as read from source, not the intended version. Appended in build order as each piece gets styled and confirmed.

1

Header — components/chrome/AppHeader.tsx

CURRENT

Correction, 2026-09-18 (2nd pass, live testing): the first rebuild followed the fixed-header/content-rises-over-it/icon-thinning spec literally, but running it for real (not just reading the doc) showed it was poor UX in practice — icons shrinking away and content sliding up to collide with them. The header now scrolls away with the page like normal content instead — a deliberate, live-tested reversal of that part of the original spec.

Structure: solid purple gradient background (#5B4DFF → #4F46E5), full-bleed, rounded bottom corners (28px). Left: real logo (assets/logo.png) filling its white circular chip edge-to-edge + chevron-down. Right, exact order: Chat → Bell → Avatar → vertical : overflow, far right — bare white icons, no circle backdrop, always all visible. Greeting block: bold white greeting, green dot + "Active Session", then a separate department pill. Search bar: one white pill with magnifying-glass, placeholder, a divider, then a filter icon inside the same input — both real, clickable Pressables. No day/night toggle.

Scroll behavior, simple: DashboardHeader renders as the first item inside the dashboard ScrollView, immediately followed by a rounded-top white content sheet. As the user scrolls, the whole header moves up and off-screen with the page — no fixed layer, no z-index trick.

Real bug this also fixed: the earlier fixed-layer version had an invisible scroll spacer sitting in front of the header, silently blocking taps on the search bar and filter icon. The new normal-flow layout has no overlapping layers, so it can't recur.

Verified live (not just compiled): ran the app via a new react-native-web setup in the Browser pane, confirmed rendering at rest, clean scroll in both directions, and that the search bar + filter icon are clickable. tsc clean, expo export bundles clean, deliveryStore.ts zero diff.

2

Sub-screen headers — components/chrome/SubScreenHeader.tsx

CURRENT

Headers for individual pages aren't defined per-screen file — they're centralized in each stack navigator's `screenOptions`. Before this entry, every stack used React Navigation's plain default header, tinted with our colors but with no custom shape — and two stacks had no theming applied at all.

Built one shared `SubScreenHeader` component matching `AppHeader.tsx`'s own visual language, wired into all five native-stack navigators that push sub-screens app-wide:

- **Back button:** the same 36×36 `accentSoft` circular chip `AppHeader.tsx` uses for Chat/Bell — a chevron-left in accent color, not the plain system chevron.
- **Title:** bold, `textPrimary`, `base16` — centralized into one component instead of repeated per-navigator.
- **Bar:** `bgHeader` background, safe-area-aware, hairline border-colored bottom line (no drop shadow) — matches `AppHeader.tsx`'s own border-bottom.
- **Right slot:** honors each screen's own `headerRight` option when set; otherwise a blank spacer keeps the title centered.

Wired into: `DepartmentStackScreen` (~100 department sub-tab screens), `ProfileStackScreen` (Design System / Feedback / Payslips), `MessengerStack`, `ViberStack` (Boardroom + its 4 screens), `DriverProfileStack`. Department home/dashboard screens are unaffected — they keep the full `AppHeader` (greeting, search, department switcher), a deliberately different dashboard-only header.

Verified: tsc clean, expo export bundles clean (3407 modules), `store/deliveryStore.ts` shows zero diff.

3

Department Switcher sidebar — components/chrome/DepartmentSwitcherSheet.tsx

CURRENT

This file's own header comment always documented the intended layout as "logo header / user row / department list / footer," but the logo header was never actually built — the sheet opened straight into the user identity row with no Rebma branding anywhere.

Added: the missing branding header — real logo (fills its circular chip edge-to-edge) + "REBMA IMPEX" text, at the very top, with a divider beneath it.

Reordered: the user identity row (avatar/name/email) moved from directly under the branding header down to directly above Settings/Sign Out at the bottom — so the sheet now reads Branding → Departments → (divider) → Identity → Settings → Sign Out.

Verified live: logo renders full and clean, departments follow branding immediately, identity row sits just above Settings/Sign Out. tsc clean, `deliveryStore.ts` zero diff.

4

Live preview infrastructure — react-native-web + Browser pane

CURRENT

Added react-native-web, react-dom, and @expo/metro-runtime, plus a "rebma-mobile (Expo Web)" entry in .claude/launch.json, so this same Expo app can run inside the Browser pane instead of only being checkable on a physical phone. This is what made entries 1 and 3 above possible to verify live rather than shipped on faith — real bugs (an invisible tap-blocking spacer, an opaque background hiding the header, content colliding with the icon row) were found and fixed by actually running the app. Going forward, UI changes get checked this way before being called done.

Next entries get appended here as each further piece is confirmed and styled. Rebma Impex Mobile · Aczone Design System · source: mobileUI.md
